

CAREPLUS™ SENIOR

CarePlus™ Senior is a new nurse call solution designed for multifunctional aged care applications. The IP system utilises durable ARM processors and IP call points to provide accurate priority and location data at reduced commissioning and operational costs. This enables a reliable solution to further stimulate greater staff and patient safety. Additional benefits of this new technology are the significant cost savings in installation. The smart inbuilt software enables an artificial intelligence to commission the system without the need for expensive specialised technicians. A scalable and targeted interface promotes forward-thinking communication through mobile connectivity and third party interface options to comply with International standards. This significantly improves quality care responses and fosters a safer environment for residents and staff.
